

3 Common Mistakes to **Kill** SQL Server Performance

PINAL DAVE

<http://blog.SQLauthority.com>

You ***NEVER*** make the
same mistake twice.

You ***ALWAYS*** come up
with a new one.

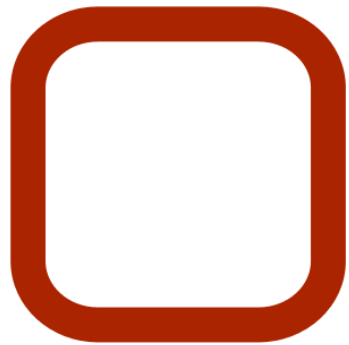

Pareto's Principle says **20%** of the invested input is responsible for **80%** of the results obtained.

80 / 20

3 **Common** Observation

Mistake #1

Auto Create Statistics

Auto Update Statistics

Correction #1

Auto Create Statistics

Auto Update Statistics

Mistake #2

File Auto Growth

Correction #2

**Fix Auto Growth
Value
= Weekly File
Growth**

File Auto Growth

Mistake #3

Implicit Conversion

Correction #3

Find It >> Fix It
Match Data Types on
Both Sides of
Condition

Implicit Conversion
